1) What will be the output of the following code snippet?

```
def func(a, b):
    return b if a == 0 else func(b % a, a)
  print(func(30, 75))
      a) 10
      b) 20
      c) 15
      d) 0
 Ans:- C
 2) numbers = (4, 7, 19, 2, 89, 45, 72, 22)
  sorted numbers = sorted(numbers) even =
  lambda a: a \% 2 == 0
  even numbers = filter(even, sorted numbers) print(type(even numbers))
      a) Int
      b) Filter
      c) List
      d) Tuple
 Ans:- B
  3) As what datatype are the *args stored, when passed into
  a) Tuple
  b) List
  c) Dictionary
  d) none
 Ans:- A
  4)set1 = \{14, 3, 55\}
  set2 = \{82, 49, 62\}
  set3={99,22,17}
 print(len(set1 + set2 + set3))
a) 105
b) 270
c) 0
d). Error
 Ans:- D
```

5) What keyword is used in Python to raise exceptions?

a) raiseb) try

- c) goto
- d) except

Ans:- A

- 6) Which of the following modules need to be imported to handle date time computations in Python?
- a) timedate
- b) date
- c) datetime
- d) time

Ans:- C

7) What will be the output of the following code snippet?

```
print(4**3 + (7 + 5)**(1 + 1))
```

- a) 248
- b) 169
- c) 208
- d) 233

Ans:- C

- 8) Which of the following functions converts date to corresponding time in Python?
- a. strptime
- b. strftime
- c. both a) and b)
- d. None

Ans:- D

- 9) The python tuple is _in nature.
- a) mutable
- b)immutable
- c)unchangeable
- d) none

Ans:- B

- 10) The <u>is</u> a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.
 - A. range()
 - B. set()
 - C. dictionary{}
 - D. None of the mentioned above

Ans:- A

Question 11

| _ | |
|------------------|--|
| Among | st which of the following is a function which does not have any name? |
| A. | Del function |
| | Show function |
| | Lambda function |
| D. | None of the mentioned above Ans:- C |
| | Alls:- C |
| Questio | n 12 |
| The mo | odule Pickle is used to |
| Α | Serializing Python object structure |
| | De-serializing Python object structure |
| | Both A and B |
| | None of the mentioned above |
| | Ans:- C |
| Questio | n 13 |
| Among a binar | est which of the following is / are the method of convert Python objects for writing data in y file? |
| A. | set() method |
| | dump() method |
| | load() method |
| | None of the mentioned above |
| Ans:- B | |
| 14 | |
| | st which of the following is / are the method used to unpickling data from a binary file? |
| | load() |
| В. | set() method |

- C. dump() method
- D. None of the mentioned above

Ans:- A

15.

A text file contains only textual information consisting of ____.

- A. Alphabets
- B. NumbersC. Special symbols
- D. All of the mentioned above

Ans:- A

```
Which Python code could replace the ellipsis (...) below to get the following output? (Select all that
 captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
 }
     Enterprise Picard,
     Voyager Janeway
     Defiant Sisko
             a) for ship, captain in captains.items():
               print(ship, captain)
             b) for ship in captains:
               print(ship, captains[ship])
             c) for ship in captains:
                 print(ship, captains)
             d) both a and b
Ans:- D
 17)
 Which of the following lines of code will create an empty dictionary named captains?
     a) captains = \{dict\}
     b) type(captains)
     c) captains.dict()
     d) captains = {}
Ans:- D
```

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains {"Enterprise" = "Picard"}
captains {"Voyager" = "Janeway"}
captains {"Defiant" = "Sisko"}
b) captains ["Enterprise"] = "Picard"
captains ["Voyager"] = "Janeway"
captains ["Defiant"] = "Sisko"
c) captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
}
d) None of the above
```

Ans:- B

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
       print(f"The [ship] is captained by [captain].")
    b) for ship, captain in captains.items():
       print(f"The {ship} is captained by {captain}.")
    c) for captain, ship in captains.items():
       print(f"The {ship} is captained by {captain}.")
    d) All are correct
Ans:- B
20)
You've created a dictionary, added data, checked for the existence of keys, and iterated over it with
a for loop. Now you're ready to delete a key from this dictionary:
captains = {
 "Enterprise": "Picard",
 "Voyager": "Janeway",
 "Defiant": "Sisko",
"Discovery": "unknown",
}
What statement will remove the entry for the key "Discovery"?
    a) del captains
    b) captains.remove()
    c) del captains["Discovery"]
    d) captains["Discovery"].pop()
```

Ans:- C
